

Alphanumeric Qabbala

& the Riddles of AL

by Luís Gonçalves (<https://gematriaresearch.blogspot.com>)

The Riddle of AL II:75-76

"Aye! listen to the numbers & the words: 4 6 3 8 A B K 2 4 A L G M O R 3 Y X 24 89 R P S T O V A L. What meaneth this, o prophet? Thou knowest not; nor shalt thou know ever. There cometh one to follow thee: he shall expound it. But remember, o chosen one, to be me; to follow the love of Nu in the star-lit heaven; to look forth upon men, to tell them this glad word."

- "Aye" starts with an "A" = 10 in AQ, standing for the 10 digits 0-9.
- "Listen to the numbers & the words" has 26 letters and sums 585, like the full English Alphabet (A-Z).

the numbers & the words:

4	6	3	8	A	B	K					
2	4			A	L	G	M	O	R		
3				Y	X						
24	89			R	P	S	T	O	V	A	L

VS.

the digits & the letters:

0	A	B	C	D	E			
1	F	G	H	I	J	K		
2	L	M	N	O	P	Q	R	
3	S	T	U	V	W	X	Y	Z
4								
5								
6								
7								
8								
9								

The “Numbers” (Digits):

$$(4 \times 6) - (3 \times 8) = 0$$

"2 4" has two digits, and it is exactly the double of "1 2" in the Alphanumeric Triangle

"3 4 5" make a perfect Pythagorean Triangle, symbolized by the "3" in the Riddle

$6 \times 7 = 42$, the reverse of "24" in the Riddle

The "89" in the Riddle could be a reference to "8 9" in the Triangle

The “Words” (Letters):

1	2	3	4	5	6	7	8	9
A	B	C	D	E	F	G	H	I
J	K	L	M	N	O	P	Q	R
S	T	U	V	W	X	Y	Z	

A B K
1+2+2 = 5 letters in "A B C D E"

A L G M O R = 6 letters, like "F G H I J K"

This table contains the reduced values of the letters in AQ.

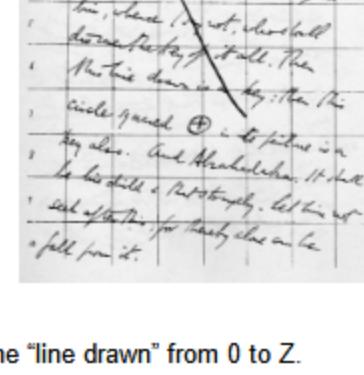

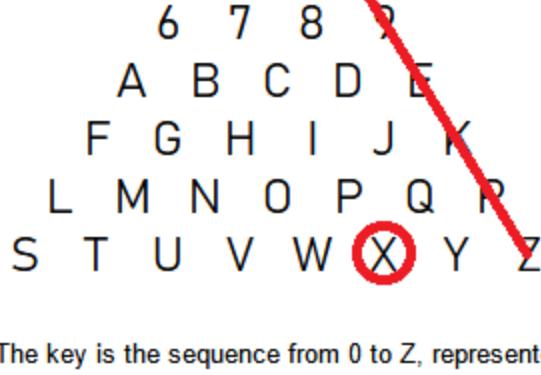

Example: A=10, which reduces to 1.

Y = 7, like the number of letters in "L M N O P Q R"
X = 6 (anomalous element)

R P S T O V A L = 8 letters, like "S T U V W X Y Z"

The Riddle of AL III:47

"This book shall be translated into all tongues, but always with the original in the writing of the Beast; for in the chance shape of the letters and their position to one another: in these are mysteries that no Beast shall divine. Let him not seek to try: but one cometh after him, whence I say not, who shall discover the Key of it all. Then this line drawn is a key: then this circle squared in its failure is a key also. And Abrahadabra. It shall be his child & that strangely. Let him not seek after this; for thereby alone can he fall from it."

- The key is the sequence from 0 to Z, represented by the "line drawn" from 0 to Z.
- The "circle squared" is the letter "X", which was an anomalous element in the Riddle of AL II:76, thus "in its failure":
 - As a Roman numeral, "X" represents the number 10, like the 10 digits from 0 to 9;
 - In Elizabethan times, the English Alphabet was called the "Christ Cross Row" ("X" is a Cross);
 - In AQ, "X" = 33, and both "English" and "Alphabet" sum 137, the 33rd prime number.
- "Abrahadabra" is a key in the sense that it is a modification of "Abracadabra", a magical formula that was always written in the shape of a Triangle.
